

AmfitCAM™ FAQ

What does the AmfitCAM Application do?

The AmfitCAM Application produces GCode Layouts from Amfit Foot Records. The GCode Layouts provide a complete milling path solution for production of Custom Orthotics on a standard CNC Router Table.

Is AmfitCAM the same as the Amfit CAD/CAM software Application with added features?

No. AmfitCAM is a separate application. It provides unique features without redundancy to the Amfit Application.

How does AmfitCAM get Foot Records?

The source is a hosted Amfit Data Services database. Retrieval of data records works the same way as the Amfit Application.

What is a GCode Layout?

The GCode Layout is how AmfitCAM organizes Foot Records for milling.

Can AmfitCAM convert data other than Amfit Foot Scans?

At present, no. Future plans include the ability to create GCode from STL.

Can AmfitCAM produce output other than GCode?

The Light version provides the option to output the Paromed® milling format.

Does AmfitCAM provide tools to Edit Amfit Foot Scans?

No. All pre-production manipulation of Records must occur using the Amfit Application. AmfitCAM provides means to configure milling path resolution, milling tools, path smoothing, and many other metrics related to the CNC.

Does AmfitCAM provide means to Edit Amfit Database Records?

No.

What is an 'Activation Key'?

An Activation Key is purchased from Amfit to enable AmfitCAM.

Can I use the same Activation Key on multiple installations?

No. An AmfitCAM installation consumes the Key it retrieves.

How do I get an Activation Key?

Make a request via any Customer Service representative. For Accounts in good standing, Key retrieval credentials will be emailed within a business day.

What Is a License Fee?

This is a fee based on usage. AmfitCAM connects to a Cut Bank in the cloud. Saving a Layout triggers a transaction to record the number of insoles in a Layout.

How is a License Fee Collected?

A Billing Invoice is periodically generated for the AmfitCAM owner's Amfit Account.

Can I Track Usage?

Yes. The AmfitCAM application provides a Transaction tracking tool for viewing License usage over time.
